Career Opportunities

Positions Available: Exhibit fabricator / setup technician

Peeling Productions is seeking qualified individuals to join our team of Exhibit Fabricator / Setup Technicians. Responsibilities include construction and maintenance of zoo and museum exhibits, supervision of set-up and teardown for off-site traveling exhibitions, and installation of custom exhibit components at various locations throughout North America.

Our team fabricates sophisticated micro habitats for live animals, complete with misting systems, automated plant watering systems, environmental controllers, and naturalistic interior scenery. We also build hands-on interactive exhibits with mechanical and electronic components and custom casework. Fine cabinetry construction, welding, electrical, plumbing, sculpting, and painting skills are just a few of the talents that may be required for a given project.

We also operate a fleet of traveling exhibitions that visit museums, zoos, and science centers throughout the US. Exhibit Fabricator / Setup Technicians oversee setup and teardown of these exhibitions and supervise local labor. This requires traveling to the host institution, coordinating with on-site staff, meeting the delivery truck, unloading/loading crates, and assembling/disassembling exhibit components.

The Exhibit Fabricator / Setup Technician position requires a multi-talented person who has good mechanical and artistic abilities and who takes pride in detail-oriented work. Candidates should send a resume and portfolio to Elliot Peeling, Development Manager (email elliott@reptiland.com).
